

Gilbarco® G-SITE®
Point of Sale System

the best POS value
in the industry!

Fuel Dispensing and Control • Site and Retail Management • Support Services

What makes G-SITE the best value in the industry?

With G-SITE, you get more without additional costs:

- First year on-site warranty and help desk support
- PC-based hardware that ensures best ROI and lower cost of ownership
- Remote software downloading capability means less down time
- Scanning with 20,000 PLUs
- Car wash interfaces to Ryko®, CAW® III, Ryko® CAW IV, Unitec®, and Kesseltronics®
- Mannatec® fleet card support
- Report printer for on-site management and shift reports
- Remote polling via FTP
- Loyalty program support that discounts fuel sales based on card type parameters
- Back office interface with more than 20 suppliers, including "built-in" interface to PDI
- Controls non-Gilbarco pumps without extra boxes
- Smaller countertop footprint with large, flat-panel display

Faster and easier to use than ever

G-SITE offers faster credit/debit approval, faster CRIND® and cashier transactions, and faster pricebook downloads. Training is quicker and easier with pull-down menus and peripheral integration, along with a brighter, larger 12.1" color flat-screen display.

C-Store and island merchandising

G-SITE offers full support for monochrome or color CRIND® with single-line or graphic display. It can support cash acceptors, RFID, and Gilbarco's new Automated Attendant car wash selector and payment kiosk. Loyalty programs are supported by a per application strategy, which makes it even easier for sponsors and customers.

The right size for your business

G-SITE Lite offers the robust power of G-SITE for those sites that do not require CRIND® control. G-SITE Lite uses the same hardware and has all the software, features, service, and training as the standard G-SITE system, but at a lower cost. With G-SITE Lite, you can have an integrated system for less than the cost of a non-integrated set-up that uses a cash register, card authorization terminal, and pump controller.

G-SITE® is designed for business growth – today and tomorrow!

Open for business

The open-architecture of the PC-based G-SITE POS System means you won't need a separate hardware migration path for your POS. G-SITE uses "off the shelf" hardware and remote software downloading that makes it easier for you to upgrade all or part of your POS when it's convenient for you.

G-SITE can be scaled to fit your business needs thanks to its modular design with standardized plug in components and hardware. You only purchase the peripherals you need when you need them. When you upgrade, you can re-use peripherals, saving money and retraining. The architecture design uses PC hardware, with stabilized memory and expanded hard drive storage.

Field-proven reliability

G-SITE is field-proven at thousands of sites across North America, with the largest installed base of any POS for retail fueling sales. Originally introduced in 1986 and now in its third generation, G-SITE has evolved into the industry standard for dependability, flexibility, ease of use, and expandability.

Complete site control

G-SITE combines a comprehensive electronic cash register (ECR) with powerful island control and card authorization that communicates sales and inventory data to your home or back office PC. G-SITE interfaces to other station and store management tools, including Gilbarco dispensers and those provided by other manufacturers. G-SITE works seamlessly with CRIND® card reader/cash acceptors; TRIND® RFID payment systems; InfoScreen® color displays; and other e-CRIND features.

The system can manage QSR sites using menus and kitchen monitors. G-SITE also interfaces with car washes, price signs, bar code scanners, video security, back office accounting, and environmental management systems.

Cashier convenient

G-SITE is designed to make a cashier's job easier. Task-driven functions are merged with centralized simultaneous fueling and in-store transactions in one easy-to-read display. From one workstation, the cashier can authorize fuel sales, monitor all fueling activity in progress, and handle in-store customer transactions at the same time. Clear, concise prompts help the cashier perform more efficiently. Context sensitive on-screen help is accessible at any time, making G-SITE easier to use than ever.

Comprehensive sales management

G-SITE was developed to help you manage sales of gasoline and retail merchandise like a pro. Fuel and retail purchases are combined into one centralized display to speed up transactions and reduce opportunity for operator error. For your management requirements, G-SITE provides electronic journals and comprehensive, easy-to-read sales reports. The system also provides tax computation, change due, cash/credit/debit payments, multiple calculations, programmable departments with upper and lower price limits, and up to 20,000 programmable PLU codes. These features help you better control inventory and allow for greater cashier accountability.

The G-SITE keyboard saves time and helps reduce operator error while conserving counter space. It contains all cash register function keys, pump control for up to 32 fueling positions, an alphanumeric keyboard for programming, and centrally located keys in one place. And, it offers the capability for keys to be programmed as one-stroke PLUs or to create macro shortcuts.

Shift changes can be made even at peak times. Fuel price changes can be initiated at the touch of a button even while pumps are busy.

G-SITE and G-SITE Lite offer better values no matter the size and volume of your operations. No additional distribution boxes are required. No additional boards are needed for car wash, scanning, or Mannatec interfaces. And you don't need additional hardware to use G-SITE with back office systems.

Integrated cash register, dispenser control capabilities, and payment processing functions enable G-SITE to assemble detailed, reconciled management information reports. A system event journal records all significant transactions, including paid-ins, paid-outs, safe drops, fuel and dry stock deliveries, and price changes. G-SITE offers other management benefits too, such as inventory control and unattended capability; and price group functions for easier dry stock price changes.

Because G-SITE is an integrated POS system with superb ECR functions, it provides features others systems lack: age and product restrictions, electronic journals of all transactions, cashier accountability, task-driven cashier functions, up to 24 macros, and G-key or 'hot' key with configuration menu.

Easy data access and reporting

G-SITE also provides centralized data collection for all store and fuel island sales. As the heart of your total site system, G-SITE is a team player, with interfaces to more back office systems than other systems available today. G-SITE comes equipped with FTP capability that provides back office access to data captured by G-SITE. Data may be polled in Gilbarco or PDI format.

The G-SITE System provides excellent printed reporting capabilities for as many or as few reports as you need, with an easy to configure 80-column format.

G-SITE® features and benefits

Increase merchandising capabilities inside and at the pump

With G-SITE, you can send merchandising information directly to the dispensers, to display new information on monochrome or color InfoScreen. With hundreds of graphics and a variety of slide shows now available, G-SITE helps you transform your dispensers into merchandising kiosks.

Unbundled for the best ROI and lowest cost of ownership
Each PC-based G-SITE System is designed to be modular with standardized plug-in components, making it easier for you expand when your business needs grow.

Convenient payment options

G-SITE can take virtually any payment form, with payment processing that's convenient for your customers, including the ability to work with all major national proprietary payment networks. It interfaces with credit/debit card networks for authorization and draft capture of credit/debit payments at checkout. And, because G-SITE controls dispensers with CRIND, your customers can use cash, credit, or debit at the fuel island with no operator assistance.

Fuel controls

Along with control of up to 32 fueling positions, G-SITE offers up to 16 price options for each grade (cash/credit, day/night, full/self-service, etc.). Dual memory feature back-to-back (or stacked) sales at each fueling position. A second fuel sale can begin before the first customer has paid, so you can accommodate more customers, faster. The cashier display shows the status of both sales simultaneously, including the rolling dollar amount of sales in progress.

G-SITE coupled with the EMC™ console helps you reconcile declining balance fuel inventory from sales data with physical fuel inventory for better inventory management. The EMC is a fully-integrated modular system for comprehensive monitoring of underground storage tanks. EMC is certified to meet the strict EPA 0.1 gallon/hour detection capability for precision tank tests.

Competitive CRIND control

G-SITE CPC (Competitive Pump Control) lets you control other manufacturer's pumps and makes it easy to make G-SITE your standard POS system in all your stores. G-SITE CPC works with Wayne Decade Series, pre-Vista Multi-Grade dispensers, and Vista models.

The system supports up to 16 Wayne pump and/or card readers, including blending and debit control. Proprietary pump control boxes are not necessary. G-SITE debit hardware is required for inside debit only. Debit at the dispenser is controlled through Wayne's debit encryption devices. When re-branding a site, please contact Wayne for the appropriate debit hardware.

G-SITE CPC controls all keypad sizes, types, and overlays for Wayne Card Readers. It also supports simulation of single-line and text-only displays, or displays that support text mode emulation.

For sites that have a combination of equipment, simultaneous support is provided for Gilbarco CRINDS/pumps and Wayne card readers/pumps.

Unsurpassed support

Gilbarco Veeder-Root offers the best POS support in the industry. With a 365-24-7 Help Desk, extensive on-site training, we could've stopped there. But we didn't. The standard warranty includes parts, labor, mileage, and travel for complete on-site service throughout the warranty period.

Peripherals control

G-SITE controls several car wash systems, including Ryko®, CAW III, Ryko CAW IV, Unitec®, and Kesseltronics®. Several third-party companies have also developed video security interfaces for the G-SITE System.
